- Size of carton : 13" x 7" max, 4 1/2" x 2" min.
- Speed of motor : 136 RPM
- HP of motor : 1/4 HP 1440 RPM, 414 v, 3ph AC geared head motor
- Printing Area : 3" x 2"

This machine is fully designed and developed by us. It can overprint carton & catch covers (Folder) It takes cartons from the hopper by the help of the feed rubber inserted in the SS feed wheel. Carton is fed from wheel to timing chains which carries carton under printing head in the guide angles. Printing head is radial two halves block on which rubber stereo can be fixed. No make ready or skill is involved because rubber back cylinder evens out the impressions.

Oscillating distributor roller spreads ink evenly shaded unbroken, full to the ink roll. Accurate location of imprint is achieved by disengaging the timing gear boss and by adjusting the timing chains to advance or retire the arrival of carton under the printing head. All shaft of stainless materials rotate in sintered Bronze bushings also major other parts of stainless steel materials.
