- ◆ Speeds 125, 180, 250 labels/min
- ◆ Label size 25x50 mm to 150x200 mm
- ◆ Weight 70 kgs.

Clear, neat, accurate imprinting on labels by NIMACH high speed label code printer machine for your immediate requirement at office or factory.

Automatic feeding by slant magazine allows label to a polished, stainless steel feed wheel, label is being picked up by rubber and it is fed to a timing chain, which carries the label under printing head.

Printing head is having a type block where individual types can be composed off, or rubber stereotypes can be fixed on block half cylinder piece No make ready or skill is involved, because rubber back up cylinder evens out the impression.

Oscillating distributor roller spreads ink evenly shaded unbroken, fully to the ink roll. Accurate location of imprint is achieved by disengaging the timing knob, and by adjusting the timing chain to advance or retire the arrival of label under the printing head.

All shafts of stainless steel materials, rotate in sintered bronze bushings (oilless bushings) Major other parts are also of stainless steel material.
